Professional Activity/Experience (Summary)

<p>Software development experience 4+ years.</p> <p>Deep knowledge of JavaScript (ES5 and ES6).</p> <p>Frontend stack with wide experience in TypeScript, React, Redux, Redux-Saga</p> <p>Other technologies including SASS, Less, styled-components, Webpack, Jest, Knowledge of REST architecture principles, various design patterns.</p> <p>Constantly trying to use uptodate technologies in development.</p> <p>Highly motivated, ready to acquire new skills as soon as it's needed.</p> <p>Experience in different software development methodologies (Scrum, Agile, Waterfall)</p> <p>Good English (for successful communication).</p>
--

Professional Activity (Projects)

Period	From 10.2020	Till Now
--------	--------------	----------

Project Roles	Senior Software Engineer
Project	<p>For farmers and sponsors who want to behave in an environmentally friendly manner. This is a web-app that will enable the farmers to seek sponsorship for their fields in order to plant flowers instead of crops in a convenient way and enable the sponsors to donate to a field of their choice and track the status of the field. Unlike the current manual process that is extensively time-consuming for the farmers and doesn't enable the sponsors to keep track of the field they're sponsoring unless they do so manually.</p> <p>The solution is being developed as a white-label solution, so it can be adopted for a different domain with minimal effort - specifically with the ability to define the investment objects, investors and users seeking investment.</p>
Responsibilities & Achievements	<ul style="list-style-type: none"> • Frontend development; • Tasks estimations.
Environment	React, NodeJS, NestJS, MongoDB, Mongoose, Microservices, AWS (S3, ECR, EKS, Route53, ...), PayPal, K8S, Docker

Period	From 01.2020	10.2020
Project Roles	Senior Software Engineer	
Project	<p>A platform to support well-known brands to sell their products online. The platform allows customers to register their brand as a customer, customize shop windows and add products. There is a large number of settings for the appearance and display of products. The customer can add both video and images.</p>	
Responsibilities & Achievements	<ul style="list-style-type: none"> • Frontend development 	
Environment	React, Redux, Redux-Saga, Less, Jest	

Period	From 12.2018	12.2019
Project Roles	Software Engineer	
Project	<p>The team of specialists created a web based application which becomes a reliable workspace provider that offers custom offices with flexible leases for growing businesses in such megapolises as San Francisco, New York, London, Berlin, Los Angeles, Chicago. The solution facilitates the process Of renting due to supplying a customer with practical steps from A to Z to follow in order to find an ideal office. The web app meets the expectations of a user since the platform has enormous variants to choose from and a diversity of types of working patterns (e.g. shared workspace, coworking spaces).</p>	
Responsibilities & Achievements	<ul style="list-style-type: none"> ● Frontend development; ● Tasks estimations; ● Participating in various scrum ceremonies. 	
Environment	React, GraphQL, styled-components, Formik, Mapbox, Docker, Node, Koa, PostgreSQL	

Period	From 05.2018	To 12.2018
Project Roles	Software Engineer	

Project	<p>The Product is a merchant after-sales solution designed to simplify the process of returning consumer electronics for both the business and the consumer.</p> <p>The solution consists of three parts: clients application, partners application, back office application.</p> <p>The first application is made for consumers, it allows them to declare their claims using the platform, choose the transport mode for exchange or repair, and track the status of their claim online.</p> <p>The second application is for back office, it was designed to manage service requests, interact with the customer, and control all the flow of the claim lifecycle.</p> <p>The third application is for partners, managers and salesmen who participate in the process of the service, it allows to check and control all interactions between client and the backoffice for every claim.</p>
Responsibilities & Achievements	<ul style="list-style-type: none"> ● Frontend development; ● Tasks estimations; ● Participating in various scrum ceremonies.
Environment	React, Redux, Redux-thunk, Semantic UI React, Less, Formik, Node, Express, MongoDB, Azure

Period	From 12.2017	To 05.2018
Project Roles	Software Engineer	
Project	<p>The objective of this application is to monitor the market value of natural resources, e.g. oil, gas, metals, grains, etc. The app facilitates the identification of value correlation due to the construction of charts and diagrams. There is an opportunity for a user to realize analysis of possible profit based on statistics for the previous 20 years.</p>	
Responsibilities & Achievements	<ul style="list-style-type: none"> ● Frontend development; ● Tasks estimations. 	
Environment	TypeScript, React, Redux, Redux-saga, styled-components	

Period	From 03.2017	11.2017
Project Roles	Software Engineer	
Project	<p>APIs for advertisement server.</p> <p>APIs are integrated with each other performing high quality data about clicks, impressions and the places where advertising appears. Using this information management API defines the preferences of the particular user.</p>	
Responsibilities & Achievements	<ul style="list-style-type: none"> • Frontend development. 	
Environment	React, Redux, D3, Node, Restify, Redis, Mocha & Chai, MongoDB	

Period	From 08.2016	02.2017
Project Roles	Software Engineer	
Project	<p>Interface for reporting and analyzing vulnerability search and management system. Provides functionality for analysis and report generating.</p>	
Responsibilities & Achievements	<ul style="list-style-type: none"> • Frontend development; • Fixing defects. 	
Environment	React, Redux, Angular, Node, Express, MongoDB
